EOS CLIMATE TO BE FEATURED IN GREEN SOLUTIONS PANEL, IN CANCUN, MEXICO

DEC. 3, 2010. Cancun, Mexico. EOS Climate, the pioneering global producer of high-quality, verified emission reductions generated from the destruction of CFCs and other ozone depleting substances (ODS), will be featured in "Green Solutions Provided by U.S. Industry." The Panel, sponsored by U.S. Commerce Department, takes place December 8th, from 9:00-10:45 in the Salon, Kingdom One, Fiesta Americana Hotel, Cancun, and is part of Green Solutions, the expo running concurrently with COP16.

EOS Climate developed the first ODS destruction project verified and listed under the Climate Action Reserve (CAR) Ozone Depleting Substances Project Protocol. To-date, the project has generated approximately 800,000 CRTs.

EOS Climate CEO Joe Madden will address how the company is addressing the climate threat posed by CFCs remaining in equipment and building infrastructure around the world, the linkages between the Montreal Protocol and global efforts on climate change, and policy actions that can be taken now to prevent millions of tons of GHG emissions while accelerating the transition to more advanced technologies.

EOS Climate's CRT's have been sold on the voluntary/pre-compliance carbon market, via destruction of CFCs collected from older refrigeration and A/C equipment which would have otherwise been released to the atmosphere.

"We have demonstrated a unique and pioneering approach to ODS end-of-life," says Joe Madden, CEO. "The company and its partners are not only diverting chemicals from re-use and release into the atmosphere, we are catalyzing long-lasting industry change."

There is growing interest in the scale, immediacy, and cost-effectiveness of GHG emission reductions from ODS destruction, as reflected in California's AB 32 developing regulatory program, and the Montreal Protocol support for pilot projects internationally that can leverage carbon finance. EOS has created rigorous standards and a viable model that can be expanded to Mexico and around the world and welcomes the opportunity to interact with policymakers, NGOs, and businesses at COP.

EOS Climate is one of several U.S. companies participating in the Green Solutions Expo at the Hotel Fiesta Americana in Cancun December 5-8, coinciding with the COP16. EOS is also attending the World Climate Summit Dec. 4-5, bringing together business, investment and government leaders to collaborate, implement and develop bottom-up solutions to climate change.

ABOUT EOS CLIMATE

EOS Climate is a pioneering San Francisco-based company, dedicated to protecting the environment via permanent, verifiable greenhouse gas reductions. The company specializes in collection and destruction of ODS, chemicals that not only destroy the Earth's protective ozone layer, but are also potent greenhouse gases. While production of CFCs was phased out under the Montreal Protocol, large volumes remain in widespread use in older equipment and building infrastructure and are rapidly being released to the atmosphere under business as usual. EOS Climate's ground-breaking program is supporting a new global effort to create market-based incentives to prevent emissions and accelerate transition to more advanced, efficient technologies. EOS Climate offers rapid project execution, permanent emissions reduction, transparency, and readily monitored and verifiable offsets.
